

# PREMISES OF THE SCIENTIFIC KNOWLEDGE AND THEIR APPLICATION IN ECONOMICS

## PREMISE ALE CUNOAȘTERII ȘTIINȚIFICE CU APLICAȚIE ÎN DOMENIUL ECONOMIC

**Angela ROGOJANU**

ACADEMY OF ECONOMIC STUDIES, BUCHAREST

**Abstract:**

*Knowledge is not only the attribute but the advancing force of our times, times which change the scientific research into a highly specialized activity where knowledge, talent and inspiration of restless researchers assure the division of knowledge and facilitate the exchanges between individuals. Knowledge, a fact and a process, represents the weapon of choice against ignorance, mimesis and self sufficiency. In the same time, economic scientific research implies a minimum of common ideas about the status of economic science, about epistemological problems and about the medium of exchange of ideas – economic language. We are now under the constellation of knowledge and information is the one that makes the difference.*

**Key words:**

*Knowledge, epistemology, economic science, economic language, communication*
